

Manojkumar Kasiviswanathan

Senior Test Engineer & DevOps Practitioner

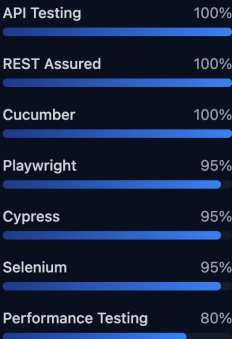

About Me

A seasoned **Test Automation Engineer and DevOps Practitioner** with over 11+ years of experience , I specialize in API and GUI testing with a strong focus on developing robust and scalable automation frameworks. I have extensive expertise in designing and maintaining test scripts for web applications and APIs using tools such as Selenium, Cypress, Playwright and Rest Assured.

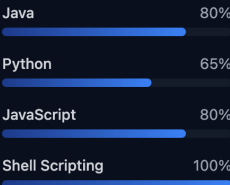

By integrating automation into CI/CD pipelines with tools like Jenkins and GitLab, I ensure efficient, reliable, and streamlined testing processes. Passionate about delivering high-quality software, I collaborate closely with cross-functional teams to identify testing requirements, ensure comprehensive coverage, and enhance overall application stability.

Work Experience

Test Automation Engineer Specialist

ACCENTURE (Client: DWP) NOV 2021 - Present

Leading test automation initiatives and implementing DevOps practices for enterprise applications.

- Developed and maintained a comprehensive test suite for regression testing
- Collaborated with stakeholders to understand project needs and develop detailed test plans
- Integrated Automation tests pack into the Gitlab pipeline for continuous integration
- Reviewed code with developers, testing, and suggesting improvements
- Created the Grafana dashboard for the production service and used prometheus query language
- Supported the creation of a separate testing framework (TAS) and published in nexus
- Implemented and maintained containerization technologies such as Docker for local service operation and testing

Senior Software Engineer

Wipro (Client: CapitalOne UK) FEB 2017 - OCT 2021

The service is utilised by the consumer to pay the monthly credit card statement payment. Multiple service Multiple services are involved, the most important of which are a customer-facing website, microservice (APIs), and a 3D secured payment gateway.

- Collaborate with stakeholders to understand project requirements and define comprehensive test plans.
- Identify test scenarios, test cases, and acceptance criteria.
- Design, develop, and maintain automated test scripts for web applications and APIs, Use automation tools such as cucumber, Protractor, Cypress Restassured and Selenium Web Driver , implement and maintain a robust and scalable automated testing framework.
- Identify and report defects, working closely with development teams for resolution.
- Perform regression testing to ensure the stability of software releases.
- Work closely with developers, product managers, and other stakeholders to ensure a shared understanding of testing requirements.
- Participate in Agile/Scrum ceremonies and provide input on testing-related aspects.

Test Engineer

Wipro (Client- CapitalOne UK) SEP 2013 - JAN 2017

Specialized in credit card eligibility checker application testing.

- Determining and selecting automation test scenarios.
- Developing an automation test plan and approach, as well as obtaining permission.
- Configuring the PDD Test Environment in order to get it up and running

Configuring the BDD Test Environment in order to get it up and running.

- Automating the framework design process.
- Creating a performance test plan and carrying it out in JMeter. Implementing it in accordance
- with the project's framework.
- Developed detailed test plans for Ab Initio ETL testing.
- Identified and documented issues and defects in Ab Initio ETL testing.
